

Satellite radio allows those of us that live in rural America to have a selection and quality of radio that we have never had before. When we travel to cities in our region it allows us to plan accordingly as we now are aware of traffic and weather conditons that in the past we were too "out on the far fringes" of city stations to receive. Satellite radio is wonderful in that it allows every genre of radio to now be available to everyone in ouor great democracy. They are providing a service we are willing to pay for as no one has ever been able to serve the publis so well. I would appreciate you allowing XM and Sirius to be able to continue serving their subscribers in the same high quality fashion they are currently offering. This growing technology should be encouraged as it is able to give America the radio it wants and needs for today and the future. Thank you for allowing the frequency for XM & Sirius, and for helping bring our nation into the future of wonderful radio!
